FOREIGN AFFAIRS

The Third World's dependence on industrialised nations

The industrialised and developing L countries are heading for a collision. The causes of renewed tension are the international monetary crisis, America's import sucharge and last but not least Washington's abrupt change of heart on

The ten-per-cent import surcharge has robbed President Nixon's own development formula of aid through trade of credibility and the entire concept of development aid, originally brought into being by the Americans, is once more

The US Senate having drastically cut back foreign aid allocations, the Nixon administration is unable to work on other than a pro tem basis.

The Senate, it is alleged, intended their move as a counter to the anti-American stand taken by Third World countries in the United Nations debate on China.

Whatever may be the short-term reaction or long-term disappointment that prompted the decision, its repercussions on other donor countries have been far from gratifying. The response of Third World countries affected, however, has been disastrous.

Spokesmen for the developing "two thirds of the world" have elected to reply with a deluge of statistics about the enormous profits made out of the developing countries.

Rich countries in both East and West, it is argued, have never done more than pay

Tito has trouble in Croatia

T ast July Josip Broz Tito, who will Isoon be eighty, was elected President of the Federative People's Republic of Yugoslavia for a further five years.

Doubtful though it may be whether Tito will last the distance physically, there can be no doubt that Tito and only Tito is in a position to cope with the political problems facing the country.

The current problems are no less formidable than those facing the country twenty years ago when Tito snatched Yugoslav independence from Stalin and set out on his own road to Socialism.

Yugoslav unity and Tito's version of Socialism are now threatened primarily, and more seriously than ever, from within and not from Moscow.

Separatist tendencies in Croatia, which have assumed alarming proportions, prove that in Yugoslavia, a country of many peoples, Communism with a human face has failed to deal with narrow, dyed-in-

the-wool nationalism. Croatian nationalism, a trend that is not far from the surface in the other five constituent republics too, has been stimulated by student protest at the "injustice" of foreign exchange earnings based mainly on the tourist trade being largely siphoned off into other parts of

It has peaked in the demand for independence and membership of the United Nations and unrest has gone as far as the Party leadership in Zagreb.

One can but hope that Tito has been able to contain unrest by accepting the resignation of the highest-ranking Croatian Party officals, the Croation problem being more than a mere matter of Tito

and Yugoslavia itself. Soviet Union intends to utilise a con-The League of Croatian Communists ference of this kind solely for the purpose abroad has, for instance, threatened in of gaining confirmation of the status quo Offenbach to call on the assistance of in Europe and the division of the Con-"fraternal socialist countries of the Warsaw Pact."

lip service to the principle of reducing the worldwide gap between the rich and the

Nation of Bangkok recently affirmed that "the developing countries must free themselves from dependence on the benevolent moods of the superpowers."

Nigeria has complained that Western aid is made dependent on so many conditions that next to no one could feel it to be desirable. The entire Third World ought to follow China's example and set out with a will to rely on its own

The extent of developing countries' indignation at the egoism of developed industrial countries was underlined at the November meeting of Ministers of the 77 Group of countries in Lina, Peru.

The name 77 Group refers to the number of countries represented at the original conference four years ago in Algiers. Little attention was paid to the latest conference in the West even though 95 developing countries were represented

The Lima charter opposes the present practice whereby the rules and regula-tions of the international monetary system are laid down by a small group of

Developing countries are no longer prepared to be the main victims of inflation exported by the rich and accordingly demand a say in the solution of monetary problems.

Yet the developing countries are hardly in a position effectively to defend their nterests. The current of mutual interchange of goods is only slowly gaining in

As long as their economies are geared not to their own requirements but to those of the international market the backward countries will remain by and large dependent on the grace and favour of the prosperous industrial nations.

The industrialised countries lay down the prices of raw materials and semifinished products, both declining steadily, while the prices of imported industrial products are rocketing.

This is why the developing countries' share of world trade declined from 21.3 per cent in 1960 to 17.6 per cent last year and why the trend continues.

talks in Helsinki.

At the same time the indebtedness of developing countries and thus their dependence on the industrialised world is increasing to gigantic proportions. It already amounts to little short of 250,000

In many cases annual repayments are higher than the country's export earnings. What mainly weighs on the Third World countries, however, are the losses sustained in trading with the industrialised nations which amount to more than development aid granted.

The Lima charter represents an all-out attack on this system of international labour distribution.

The current system is indeed outmoded. Industrial countries are for the most part headed for the second industrial era and ought at the very least to allow the developing countries to progress on a large scale towards the first industrial revolution.

A general undertaking to accord preference to goods from developing countries is not enough. The Common Market, for instance, has done a splendid tob of elling" its customs preferences in terms of propaganda but in practice the procedure has proved so long-winded and hamstrung by exceptions that the effect has been limited in the extreme.

What matters are not general declarations of intent and proud statistics of concessions that have little bearing on their success but the efficacy of aid to poor countries for the general public.

Otherwise the ultimate aim of development, a greater degree of equality, will never be achieved.

Many a cherished motive stands in the way of this aim. Western donor countries' tendency to invest regardless who stands first to benefit is, for instance, frequently extremely dubious.

And unfortunately there is a tendency in many developing countries to aim at growth regardless of the cost. Too often the fundamental problem of providing work for as many people as possible and developing regions evenly goes by the

For reasons of this kind, for example, American and Federal Republic firms, disregarding political aspects, have concentrated on the development of West Pakistan, putting East Pakistan at a still greater disadvantage and contributing towards the current political explosion,

Development in the full-scale meaning of the word presupposes political con-sideration of the internal structure of Third World countries.

This factor will determine whether or not the growing differences between industrialised and developing countries, a much-vaunted gap, will one day assume the serious proportions thinking politi-cians fear they might.

soon as he returns from Moscow. He knows he is faced by this difficult task but he also knows that, with the Wehner speech in the back of his mind, he must first state and justify his party's opposition in public and in the Bundestag during the debate on ratification.

Only when the Moscow and Warsaw treaties are in force will he be able to make a speech which might contain the sentence that the CDU/CSU accepts the fact that the treatics with East and West form the basis and framework for all West German foreign and reunification pol-

If this is so plain and so little disputed today, it is only natural to ask whether such a complicated detour is necessary. CDU/CSU leaders believe it to be vital as only then can they preserve solidarity, escape responsibility for government policy and at the same time appear as a worthy partner for discussions.

These calculations - not so rare in politics as some people might think - will pay off if the treaties and the Berlin settlement are not endangered. Even Barzel and Strauss do not want to see the treaties endangered as this would burden them with even more responsibility and provide them with a shambles that they themselves would have to clear up.

Their arguments, especially in the Bundestag, will therefore be restricted to the alm of not losing too much credibility among their own supporters and not alienating potential voters too much.

The Opposition will find it harder to justify their resistance after the recent publication of Gromyko's interpretation of four points that long played a role in discussions of the Moscow Treaty.

Even though the form of such settlements in connection with the Treaty appear almost farcial, their binding character cannot be disputed. Much of the phraseology suggests that Gromyko dictated his points with teeth clenched together rather than with a light heart.

But the interpretations are now there and Freiherr von und zu Guttenberg can no longer state without contradiction that the Treaty gives the Russians a right to protest when newspapers in the Federal Republic write about reunification.

The interpretation of the so-called European option has the greatest political significance. Up to now the Opposition has never grown tired of critising the treaty for making Western European union practically impossible.

Moscow will continue to oppose a union of this kind and will put obstacles in its way wherever possible but the West German-Soviet treaty is not one of these obstacles. People with some degree of insight realised this long ago and the subject should be no matter of controversy in the ratification debate.

The same is also true of the alleged intervention claim in the so-called enemy states clauses of the United Nations

Kurl Georg Kiesinger and Rainer Barzel played up this problem in Bonn during the days of the Grand Coalition of Christian and Social Democrats because they either wanted to get the clauses scrapped or needed an excuse to show that nothing could be gained from Mos-cow during talks with Russian Ambassador Tsarapkin.

The house of cards collapsed when the Western powers issued subtly plurased statements declaring that they too had no intention of revising the United Nations statute because of Articles 53 and 107.

Gromyko's interpretation is as good as the French one that stated plainly that France saw no right of intervention for an individual country in the enemy states Hans Reiser

Süddeutsche Zeltung, 15 December 1971)

Soviet statements show no departure from previous policies

conclude that a condition of German reunification for the Russians continues to be the inclusion of the whole of Germany in the Soviet sphere of influence and in the camp of those countries with a Communist system.

The existence of the German Democratic Republic and the prestige it has recently acquired ensures Moscow that reunification will not occur under any other conditions.

Already it appears practically impossible for reunification to occur against the wishes of the GDR. When the two German States join the United Nations the GDR will be protected against all ideas of this kind. Gromyko's apparent concession has cost the Soviet Union

The same is true of Gromyko's statement concerning the frontiers recognised There is a precedent. At Russia's in the Moscow Treaty. Here too there could have been a Soviet demand for the existing frontiers, including those within Germany, to be declared immutable and inviolable. But it was only wise not to make this

demand, which would also have been unacceptable to the government in Bonn, or at least not to press it home. Moscow is once again home and dry with the statement that the two German

States can discuss their frontiers with one another like any other States. The Soviet leaders know that the GDR will never embark on any adventurous course that could endanger its existence.

The major powers are often described as waging wars through representatives. What the Soviet Union is doing in Germany can be described as security through representatives.

The most curious feature about Gromyko's statements is that they were published at the instigation of the West

German government. The coalition of Social and Free Democrats needed these official statements in order to be in a position to reject claims that it had come to accept German partition for all time. Otherwise the complaint to the Constitutional Court against the Moscow Treaty would have had more likelihood of being upheld than

is now the case.

By prompting the Soviet government to issue statements of this kind, the government in Bonn unintentionally provided Russia with an alibi. For those Germans who tend to attach

greater store to the unity of their country than to anything else the Soviet Union is now in the same position as the Western powers who have often accepted the idea of reunification in the past. The past majority of the German

people will recognise the snag however. They have never been interested in reunification under Communist domination and they will not be in future either. Wolfgang Wagner

> (Hannoversche Aligemeine, 15 December 1971)

Russia has no objection to reunification

The Soviet Union is not opposed to the voluntary unification of States, it is claimed in Russian Foreign Minister Andrei Gromyko's accompanying statements to the Moscow Treaty. Gromyko first made this statement lahis talks with West German Foreign Minister Walter Scheel on 29 July 1970. The statement could be of considerable importance for a political unification of the Common Market countries as well as for the reunification of the Federal Republic and German Democratic Republic. The West German government believes that the Soviet Union would not rule out the reunification of the two German States.

commenting on the recognition of frontiers, Andrei Gromyko said, "We made a concession to you in the frontier issue when we dropped the term recognation. That was a very complicated and painful process for us.

Article one of the Moscow Treaty signed on 12 August 1970 states that the Federal Republic and the Soviet Union base their views and actions on the actual situation in Europe.

Before the Moscow Treaty was concluded the Opposition accused the government of thereby recognising the frontiers of the German Democratic Republic.

Speaking about the alteration of frontiers, Gromyko said to Walter Scheel, "And now something to overcome your doubts. When two States voluntarily agree to unification or to the correction of frontiers as we ourselves have done with Norway, Afghanistan and several times with Poland or when States want to dissolve their joint frontiers and unite like Syria and Egypt, we would never think-of criticising as this is an expression of sovereignty and is one of the inviolable rights of States and peoples. Anyone raising questions on this point sees prob-

ems where there are none." Accordingly, the Moscow Treaty states that nobody should violate the present European frontiers. The Treaty rules out changes caused by non-peaceful means.

Foreign Minister Gromyko also made a statement on German reunification. "The third issue in which we have made you concessions is the possibility of German reunification in future," he stated, "Your position is plain and so is ours. We too have our own ideas of how future

German unity should appear." "We could have drawn up a treaty crushing all plans for German reunification," he added. "Then any mention of reunification would have been contrary to the treaty."

Government spokesman Rudiger von Wechmar said Bonn saw the possibility of reunification in the statement that Moscow too had its own ideas on the future nature of German unification. As Gromyko does not view reunifica-tion as contrary to the Moscow Treaty and has not crushed all plans to this end

there is still a chance of reunification, in a letter to the Soviet Union the West German government stated that it still adhered to the aim of German unity. Gromyko explained the claim to inter-

vention in his talks with Scheel. "The second question of principle on which we have made concessions is the renunciation of force bearing in mind the United Nations Statue," he said. "We understand your interest in this question. History cannot be revoked and it is from history that one regulation of the United Nations statute resulted. "But we have decided to conclude a

Benevolent view of Konrad Adenauer by British German expert

Delegates of already existing regional organisations that were later to form the Christian Democratic Union met for the first time in Herford, January 1946. Terence Prittle reports that as many of

the delegates did not know one another the chair remained vacant until Adenauer filled if with the remark that he should take over the running of things as he was the oldest delegate there. He never surrendered that position.

The British journalist and historian Trance Prittie, the remarkably well informed author of this biography of the first Chancellor of the Federal Republic of Germany, described this scene after spending five chapters outlining the years of German history in which Adenauer

was born and grew up.
His development is traced from the time he was a subject of the German Empire and covers his period as mayor of Cologne and president of the Prussian Council of State ("King of Cologne"). We learn how he lived in the shadow of the swastika and, after filling the vacant chair, began to lead both a new party and a new Germany, as Prittie puts it.

No new Germany arose, despite or perhaps because of Adenauer's willpower. The makeshift Federal Republic remained subject to the limits that Adenauer set until his departure from the leadership.

He wanted to be leader of his party and president of the Parliamentary Council. the forerunner of the Bundestag. He

He wanted Bonn to be the capital of the rump German State represented by the Federal Republic, "Even in the event of the Russians no longer occupying Berlin, Berlin must not become the headquarters of the party," he once said. Another time he remarked, "I believe that the German capital should be in the south-west rather than in Berlin with its position far to the east."

He wanted a centre-right coalition and achieved this despite convincing arguments of his friends who wanted to avoid having only a narrow majority in the Bundestag and hoped that a broadlybased government would be welcomed more readily by the Western powers.

He wanted to be Chancellor despite his age of 73 and told his friends that his doctor had said his health would stand up to the obligations incumbent upon a Chancellor. He said that out of the blue, without having been asked to take over the position, though this did not prevent him from later claiming that he had been surprised by the proposal that he should become Chancellor.

German reunification

means). We do not envisage any excep-

"That is our answer to your discussions on the home front. I reiterate the word exclusively. Do you think we our consider it to be a scrap of paper. It is more

Accordingly, the Moscow Treaty states that disputes will be solved exclusively by peaceful means. Articles 107 and 53 of the United Nations Statute permit the victors of the Second World War to intervene in the affairs of the former enemy States.

According to the Moscow Treaty, the Federal Republic and the Soviet Union wish to base their relations on Article Two of the United Nations Charter which rules out the use or threat of force.

Klaus Bohnhof (Neus Ruhr Zeitung, 14 December 1971)

and he wanted German military units. Here and in many other cases he had his way. The methods he used are described coolly, objectively and basically benevolently. They were often unusual, to say the least, and not always admissible.

Terence Prittie writes in his readable biography that about half the members of the first Cabinet had had little political experience but were good, hardworking administrators.

This was exactly to Adenauer's liking as he intended to impose his personal

Terence Prittle: Konred Adenauer, German translation published by Goverts Verlag, Frankfurt, pp 460 plus pp 31 notes, 28 Marks.

authority on everyone, a course that was doubtlessly necessary to keep the government together.

Adenauer had a well-drilled team around him. Prittie states that, all in all, his first Cabinet did him great service. It could even be described as too accom-

Prittle exemplifies this attitude of Cabinet members in the passage concerning the resignation of the then Minister of the Interior, Dr Gustav Heinemann, or in his description of the dangerous methods employed by Chancellor Adenauer to achieve rearmament. It was all very gratifying, Prittie comments, but in his haste Adenauer had forgotten to tell his Cabinet anything of his intentions.

Adenauer and his-Foreign Minister, Heinrich von Brentano, once travelled in the same lift together in Paris. Brentano pressed the button and they arrived in the callar instead of the floor they wanted. Prittie quotes someone who learnt of the event as saying, "That was the first and

He wanted arms to be in German hands last time that the Chancellor allowed Brentano to take the initiative."

Konrad Adenauer's person is described against the background of "four ages of German history", as the author subtitles his book. Adenauer had a complex about Prussia,

Prittie reports, "A Prussian is a Slav who has forgotten who his grandfather was," he once said, "Germans are Belgians with megalomania," was also one of his say-

These two statements made to an American journalist were officially denied after publication. Prittie claims that the journalist complained to Adenauer only to be told, "Of course I said it. But I am now responsible for a whole country and you are only responsible for your type-

The still incomprehensible attitude of Adenauer towards such people as the two Social Democrat officials Schroth and Scharley is not mentioned in the book although it was most strongly manifested during a public session of the Bundestag.

Terence Prittie has not stressed these events that mar the total picture of Konrad Adenauer. On the contrary, his discription of the former Chancellor and his character is benevolently disposed in Adenauer's favour. At times the description reaches an invisible limit, certainly according to Prittie's conviction and thorough knowledge of his subject and out of respect and political (liberal) insight of the international context.

It is at moments like this that the effect of the book is strongest on the critical reader, Prittie, an expert on German affairs after his nigh on twenty years as West German correspondent of the Manchester Guardian, compares Adenauer's political decisions with the intentions of the allies. An example of this is his

European policy, another his efforts to improve Franco-West German relations for once and for all.

The chapter on a "Republic of the Rhine" (the author adds a question mark in the chapter heading) is written with scientific exactitude and will be read with particular attention.

Prittie believes that the events of that time had the most powerful effect on Konrad Adenauer's life. Adenauer's post. | On 11 December 1971, exactly one war policy concerning Germany always involving the destruction of Prussia and

Fifty years of German history

men such as Hugenberg, Neurath, Seldte and others.

Broszat begins his section by stating that the basic reason for the upsurge in the Hitler movement was not its totalitarian ideals but the economic and political crisis of 1929 and 1930 with the nationalist mass movement this caused in middle-class circles.

This opinion is shared by another Munich historian who turns to the subject of Hitler in another two-volume history -Twentieth Century Politicians. Deuerlein too believes that National Socialism was a conglomeration and not a unified system. Deuerlein's article is one of the many

biographies dealing with persons who helped forge twentieth history whether in the "Age of World Wars" (volume one) or in the "Divided World" (volume two).

The main history-makers contained in the first volume are President Wilson. Lenin, Trotsky, Sun Yat-sen, Mussolini, Hitler, Rossevelt, Stalin and Churchill as well as men like Briand, Stresemann (this double chapter, also written by Deuerlein, is one of the best in the book), Ataturk (a rather dry description) and Masaryk (ideological slanted).

Volume two begins with a discriminating appreciation of Konrad Adenauer by Munich Professor Hans Maier who is now Bayarian Minister of Education.

A passage of his deserves quotation:
"Only rarely did a historical impetus or a

new epoch-making idea come from him.
But all the higher is the estimation of Konrad Adenauer's performance at 1 statesman after the Second World War. State restoration and the diplomate plans for a future when there would be joint policies for any free Europe, end though their effects remained temporarily limited and in Germany were always closed by linked with the name of their originator."

The term "initialling" means that the negotiations of the two sides sign with the rest page of the text they have thrashed out and show that their the state is followed by the signing of the treaty by government plenipotentials.

and Mao go far beyond the European forin, horizons common up to 1940. The Nasser, Ben Gurion, Khrushchev, Ker nedy and de Gaulle are also included.

But the life histories of the individual heads of state and heads of government heads of state and heads of government are systematically classified according to their effects on contemporary history and their effects on contemporary history and the conditions under which they worked the co But the life histories of the individual

(Kleier Nachrichten, 11 December 1971)

Applicated and persons can also be GDR State Secretary Günther Kohrt (left) and Ulrich Müller from the West Berlin city back or arrested. But the GDR government initialling the inter-city agreement

authorities are obliged to inform the West German authorities as soon as possible and give reasons for the arrest. Normal border controls will be re-

stricted to identifying persons by examining their personal documents. This will take place without the driver and other occupants having to leave their car. Freight traffic will be officially sealed

as far as this is possible. Only the seals and accompanying papers will be con-trolled. The GDR authorities can attach additional seals, though they need not. No traveller on the transit routes will

have to pay the usual fees after the agreement comes into force. Instead, Bonn is to pay a lump sum of 234.9 million Marks a year between 1972 and

The other important agreement deals with the regulations applying to West Berliners visiting East Berlin and the German Democratic Republic. In future they will be able to visit East Berlin or the GDR for a total of thirty days a year for humanitarian, family, religious, cul-tural or tourist reasons. Further visits are permitted in cases of sickness or death among relatives.

The agreement is a clear improvement compared with the regulations in force for West Germans, While West Germans are normally allowed to visit only close relatives in the GDR (excluding East Berlin), West Berliners will in future be permitted to visit the GDR for a variety of other reasons.

West Berliners can travel alone, take part on day excursions or trips requiring a longer stay and can book holldays in the GDR. West Berlin bus operators can be allowed into the GDR for day excursions and round trips.

But unlike the West Germans, West Berliners may not visit East Berlin as many times as they like but are restricted to thirty days and have to obtain a permit issued by one of the five bureaus to be set

It is stated in a protocol to the agreement that written applications to visit East Berlin will be dealt with without delay and personal applications will be dealt with on the spot.

GDR State Secretary Kohrt has stated that, despite the new transit regulations, refugees who left the GDR "illegally after 13 August 1961 will be excluded from visiting East Berlin and the GDR.

State Secretary Egon Bahr (left) and the GDR's Michael Kohl Initialling the new transit agreement between the Federal Republic and the German Democratic

West Berliners who have committed crimes according to the laws of the German Democratic Republic will also be excluded from the new visiting regulations. If this is not discovered until after entry to East Berlin departure will be allowed as long as this crime was not a crime against life.

At least five Marks must be exchanged for one-day visits. Ten Marks per person

per day must be paid for a longer stay. A visa for a one-day visit will cost five Marks, or fifteen Marks for a longer stay.

Friedrichstrasse station is to be used if entry into East Berlin is to be by rail or underground. Eight crossing points are available for pedestrians and seven for car-drivers, though this is only allowed in exceptional circumstances.

Annamarie Doherr (Frankfurter Rundschau, 13 December 1971)

A Berlin view of the new agreements

The inter-German agreements following the Four Power Berlin Agreement have practically been drafted in their final form now that the initialling has taken

They will be accepted by the three Western powers, the German Democratic Republic will certainly not agree to any improvements and politics in Bonn will continue to travel in the general direction of the ratification of the treaties with the Soviet Union and Poland.

The fact that the agreements represent a considerable improvement over the present regulations cannot be taken as a yardstick. Transit between West Berlin and the Federal Republic may well be quicker, better and more secure when the agreed regulations on civilian transport come into force. West Berliners can now travel to East Berlin and the GDR once again. All this should not be underrated but it must be measured against the chances offered by the Four Power

KielerNachrichten

If this yardstick is applied and consideration given to the price paid by the West - a scaling-down of the Federal presence, the establishment of a Russian consulate-general in West Berlin and agreement that the GDR should be admitted to the United Nations, amongst other concessions - it will be seen that the results of the inter-German agreements are somewhere around the lower limits of what had been hoped for.

The truly unsatisfactory result of the agreement on visits by West Berliners to East Berlin alone makes the overall verdict worse. State Secretary Bahr managed to achieve more for the transit regulations than the Berlin Senate.

Transit routes are of course the most important factor in Berlin's existence. It will now be easier and quicker to travel between the Federal Republic and West Berlin but it will not be so secure as envisaged by the Four Power Agreement.

The most serious feature is that the GDR could not be moved to forgo their practice of issuing visas. The GDR's claim to sovereignty has been upheld, even though clearly restricted.

Another drawback is the term "abuse". Uniortunately we shall only see in prac tice what is meant by a "reasonable suspicion" enabling the authorities to search a motorist and turn him back or what is meant by "other crimes".

Another point is whether the GDR will make the situation more difficult some time in the future by changing laws affecting its internal security, as is accepted in the agreement.

Satisfactory? Acceptable? West Berliner may find things easier in future but their position will still not be enviable. Renate Marbach.

Too many actors are out of a job

to increase. The Classics have been performed too often and fewer and fewer new plays are really convincing. Theatre managers, producers and star actors are tending to change jobs more frequently. Subsidies are being reduced. Actors too are unhappy. They fear for their jobs with the constant whirligig of general menagers and producers. Thirty thousand actors are already unemployed. Ursula Krechel examines the causes and effects of the theatre crisis in this article.

ctor Horst D. has a telephone com-A plex. He rarely leaves the house any more but hovers over his telephone waiting for his agent to tell him he is

Elisabeth S. is much in demand as a model. Her real profession is actress and she would like to return to the theatre. "But I just could not stand living two years in Ingolstadt and two years in Bielefeld at eight hundred Marks a month," she reports.

Jochen T. is considered to be a very good actor. Since leaving drama school he has always played the roles of young boys. He is now 34 and had gradually decided to turn to other parts. But wherever he applied, theatres only wished to engage him for his normal role.

He did not want to carry on like that whatever happened. He continued writing letters of application for some time but then gave up and left the stage to run his father's wine shop.

These are only three cases of unemployed actors, three cases in which the dream of a career ended in panie, resignation or bitterness.

Theatre people in this country do not like talking about their problems once they leave their little circle. But thentrical agencies, labour exchanges and welfare offices are well-informed. The number of actors currently unemployed is estimated to be at about the thirty thousand mark.

Dr Hess of the Frankfurt-based Central Bureau of the Stage, Cinema and Television Labour Agency believes that this estimate is too high. He believes there are between ten and fifteen thousand unemployed actors in the Federal Republic.

The exact figure cannot be determined as the central agency does not include all actors in its files. A number of private theatrical agencies work alongside it. Some actors are registered with a number of agencies, others are not registered at

The way an actor views his position is also important in this respect. Günther H. reports. "Something in me is broken when I no longer act and then I no longer act and then I no longer look upon myself as an actor."

On the other hand, as in any profession, there are a number of so-called actors who do nothing to deserve this do represent it in essence." description.

oblems of unemployed actors cannot be reduced to mere economics. Today acting does not necessarily mean economic security nor does unemployment mean economic misery.

Most of the actors working at the smaller theatres in this country are underpaid. Many actors unable to find acting jobs are engaged by radio or dubbing companies.

The most important reason for the glut of actors and the relatively small demand of the theatres is the disorganisation of drama tuition in the Federal Republic.

The large, recognised drama schools more than cover the demand for new the West German economy" to "creation actors. But there is also the large number and preservation of a healthy environof actors who have been trained or rather ment in an industrialised society".

Discontent within the theatre continues exploited by small drama schools or private teachers and have little chance of

finding a job. The West German Stage Association is now conducting a survey among young actors to obtain accurate figures for the first time on the connections between courses of training and professional opportunities.

The survey should also give some information about the proportion of actors engaged by a theatre, those who fail to find a job and those who voluntarily leave the theatrical world.

It is the latter group that deserves particular attention. These are mainly young actors who prefer to choose another profession because they see no chance of implementing their artistic and social ideas under the present rigid system of rehearsals and performances.

The student and apprentice movements have also had an effect on drama students. Students already have some say at a number of drama schools. They themselves choose the syllabus and take over responsibility for lessons. Teachers have no more than a consultative function.

It is understandable that these young actors want to take over more than the partial function prescribed for them by the theatrical system.

It is understandable that they do not want merely to act but would also like to discuss why they are playing their parts and performing a certain play.

It is understandable that their working conditions are just as important as the results of their work. It is also understandable that they come into conflict with the patriarchal role of the producer during rehearsals.

"During my first few months at a theatre I thought my mind had been amputated," actor Wolfgang K. explains. He now only signs short-term contracts and from time to time takes a post outside the theatre so that he can use his

Like Wolfgang K. actress Barbara Sichtermann and actor Jens Johler also took steps of their own. In 1968 they sent the periodical Theuter Heute (Theatre Today) an accurate analysis of the sources of conflict within the theatre.

Turning to the relationship between producer and actor, they wrote, "To carry out his ideas the producer needs actors. Actors also have drive, imagination and rational and emotional criticisms. As the producer suppresses these forces a priori because of his overwhelming position of power he has little chance completely realising his plans by

coming to terms with the reality of the actors. Even extremely intelligent and rational producers rarely attain anything with her old parts. of the sort because, though they may forgo the actual practice of power, they

(Hannoversche Aligomeine, 3 December 1971)

The Federal Labour Institute forecasts that people will no longer have a life-long position in future but would have to change their jobs two or three times during their career. The psychological effects of this on members of the artistic professions have scarcely been consider-

THE GERMAN TRIBUNE

As in other professions, unemployment among actors poses more and more problems the older they are. Because of their personal situation it is normally impossible for them to leave a theatre when they no longer see any possibility of artistic development for themselves.

An actor with children of school age cannot up roots every two years and change theatres. An actor who recognises that he is merely parading his talents in routine fashion and not providing the artistic achievements expected of him no longer reacts spontaneously and does not enjoy his acting work.

Many elderly actors are in the same

position as Peter Handke's Kaspar. As soon as they ponder over what they have learnt and how they use it they become insecure. There is then a discrepancy between the expected performance and the performance actually given.

Actors are not made any better by the fear of dismissal either. Between November and January theatres have to decide who to retain for the next season. Regular theatre-goers can sense that

decisions are being made on extending or not extending contracts from the quality of performances during this period. Theatre doctors report the typical

complaints affecting actors - nervous stomach disorders, insomnia, addicition to swallowing tablets and serious mental disorders leading to strain.

The frequent changes of theatre managers in recent seasons has had much less issuence than expected on the labour market for actors. The Central Bureau states that the wave of dismissals and re-signings usually comes one to two years after a successful change of theatre manager. Most new theatre managers try to work together with the actors engaged before their term of office.

The rumours about Zadek's personnel policy in Bochum are also false. Former manager Schalla claimed at a press conference that Zadek would only retain seventeen of the ninety theatre em-

The Bochum branch of Theatrical Association on the other hand states that 22 of the fifty actors resigned of their own accord, twelve were retained and sixteen did not have their contracts renewed.

An actor loses his artistic touch if he remains without an engagement for a number of years. That is why it becomes harder and harder for an actor to obtain a job as time passes since his last post.

On top of this, an interruption of any length normally means a change in the type of role played. When a young actress normally playing the role of innocent girls leaves the theatre for a few years and returns with the experiences gained as a wife or mother she is too old carry on

There will also be a break in her artistic career as her means of artistic expression will not have kept pace with her personal Ursula Krechel

Tou should be allowed to do more." complained nine-year-old Florian from Hattersheim near Frankfurt, a wish expressed frequently in the hours of conversation between Munich writer Menika Sperr and 152 children of various bekgrounds living in places as far apart s Sylt and Weilheim.

The talks were taped, reduced to book form - the finished product has been published as a Kindler Paperback - and have now been discussed by Munich's

The six to sixteen-year-olds bluntly told the writer what they thought of their parents. The excerpts which the authoress read were from beginning to end an indictment of a society that still had a hierarchic structure: father - mother child, despite flashes of humour that

It was the complaint of a large oppressed minority of people who are too small, unaware or weak to kick against

the pricks like other groups.
"What must I do?" asked ten-year-old Dieter from Munich. "I sometimes scream loudly but no one can hear me. And then I have to do as they say."

But a process of solidarity amongst children is starting to make itself felt. Exactly 120 of the 152 children inter- church: "You cannot say a word and

viewed said that they played with children whether their parents liked them or not. Class differences are not recognised.

But that is one of the few taboos children can break. Usually they can only resign themselves to their situation. "Actually you can never do anything," eleven-year-old Friedrich of Hamburg said. Perhaps I shall run away to Australia

Punishment followed close on the lieels of prohibition. Only seventeen of the children interviewed were not beaten by their parents. Only fourteen of them accepted the idea of punishment, none of them found it any use.

"All right," one of the children told Monika Sperr, "I accept the punishment and when I'm left alone afterwards I get really angry about my parents."

A beating causes less fear or anger than a method of discipline commonly used today — stopping children from watching television. Television indeed causes a lot of anger within the family. "Our parents always decide what channel we see," the children complain.

The writer, the wife of Munich playwright Martin Sperr, found many answers confirming the fact that the Federal Republic was a country hostile to chil-

"When I go on a nice bicycle ride I have to ride around on the farn. And there are always people at the farm who have got something against it," one child reports. Another child complains about going to

indeed of everyone who matters

that's no fun. God also used to be noisy from time to time."

Children cannot be expected to understand the reason for such authoritarian patterns of behaviour, "Everything has to be done in a certain way," they complain.
"But why must everything be done in a

Although our children are said to be better off now than ever before almost all of them would like to be adult. Six-yearold Caroline from Berlin reports, "I don't want to be a child because you have to learn so much and you can't do what you what your money and you are always told off. When you're big you can do what you want. When I'm big, I'll be my own boss.

When these children grow up they plan to bring up their sons and daughters in quite a different way. They will not use violence for instance.

"Hitting a child is no use," they say. "If you talk sensibly with a child about what he has done he will try to stop

Their style of life will also be different. "I don't want to be like all these stupid adults who always sit at home watching television and only go out to work and who read this bloody awful *Bild-Zeitung* and all that rubbish," said sixteen-year-old Christa, the daughter of a Hamburg

The discussion of these statements in the Comma Club soon reached ideological depths of course. These home truths out of the mouths of babes and sucklings were the inevitable answers to the undemocratic behaviour of parents who were all too ready to shelter behind the institutionalised power of schools and churches, a spokesman of the Education and Science Trade Union claimed.

He quoted from a letter written to parents by Bavarian Education Minister Hans Maler stating that the schools would ensure the necessary degree of order,

(Kölner Studt-Anzelger, 2 December 1971)

Extra tuition for foreign children

The Pestalozzi Association established 1.23 years ago by the Ruhr mining industry now plans to turn its attention to the children of foreign workers in Ruhr

The Association recently announced that between seventy and one hundred children in Gelsenkirchen would receive additional language tuition in the initial trial scheme. More than twenty thousand foreign workers are employed in Ruhr

It has been estimated that more than half these workers have brought their children to this country so that somenere between three and tour thousand foreign children of school age are living in the Ruhr area, leading to considerable linguistic difficulties in German schools.

Educationalists are convinced that the intelligence of the mostly Turkish and Yugoslav children is comparable with that of local children. This is shown by their good performance in arithmetic. It was only in subjects dependent on language that the difficulties cropped up.

The language barrier also prevents com-munication between foreign children and their new environment, the Association

bom - the maximum period is six years - parents often do not notice the ginnings of sight deficiency.

Even when this cancer of the retina does not develop until the child has passed through the baby stage, subjective symptoms can still be lacking as long as the tumour does not extend into the optical axis and impair sight.

But children often fail to recognise this impediment too at first as the second, healthy eye compensates the defective fleld of vision of the sick eye.

It is a different situation when both

retinas are affected though this occurs only in a third of all cases. Then the sick child will be seen to have difficulties of

Another symptom pointing to this complaint is a sudden bright reflex when light strikes the pupil, looking much like the eyes of a cat in the dark. If parents observe this amaurotic condition in their child this is a danger signal.

Cancer of the retina in babies and small

children is particularly dangerous because mestastes are formed at a very early stage in other organs and tissues, especially in the bone tissue. Treatment is hopeless by

Like almost any other type of cancer, cancer of the retina must be diagnosed as soon as possible if there are to be any chances of recovery. Professor Meyer-Schwickerath said that if diagnosis was early the affected eye could be saved along with the life of the child.

Up to a few years ago any child suffering from cancer of the retina had to have the whole eye removed even though large sections of the retina still allowed

It was technically impossible to remove the affected part of the retina while leaving the rest of the eye intact. Now however the malignant tumour can be cut off from the blood supply by concentrated light and thus "starved"

When using concentrated light, doctors take advantage of the optical characteristics of the lens. High temperatures are created on the retina and the tissue protein is "boiled". A detached retina can also be repaired in this way. Laser beams have recently been used in this type of operation.

Doctors thought of using this technical principle to destroy cancer of the retina in its early stages of development. But experiments showed that this was not always successful.

Ophthalmologists at Essen therefore decided on a different course and prescribed a ring-shaped burning zone

around the tumour - clearly recognisable under an ophthalmo-microscope - in order to cut it off from its supply of blood and other necessary substances.

cells died off and the tumour turned into a scar on the retina causing no serious loss of vision as long as the other eye was still

But patients have to be checked regularly until they are six and they must undergo complicated examinations under anaesthetic as there is a great danger with nherited cancers of the retina that the

Werner Heisenberg celebrates seventieth birthday

(Photo: Liselotte Strelow) Conditions of the Scientific and Technological World.

It is no coincidence that Heisenberg was one of the eighteen physicists from Göttingen who publicly warned against a West German atom bomb in 1957, thus incurring the wrath of Chancellor Konrad

In the autumn of 1963 it was again Heisenberg who told members of the Bundestag that the disastrous position of research in this country was a result of inadequate financial support. He thus contributed to the increased attention later paid to the sciences by both the Bundestag and the government.

Heisenberg had retired from his post in the meantime and a younger person now heads his institute. But he is still just as active. In his new book Steps over the Frontier he deals with questions such as the relations between modern science and modern art, the truth content of scientific claims and the future of technology as it exceeds previous limits.

Born in Würzburg on 5 December 1901, Werner Heisenberg was appointed professor of theoretical physics at Leipzig University at the young age of 25. He eceived the Nobel Prize when only 32. These were not isolated achievements.

Werner Heisenberg was one of these important scientists, not so common today, who was also a person in his own right. He did not have the air of privy councillor about him. He never tried to erect an ivory tower around him, as easy as this might have been for a Nobel Prizewinner in a country such as ours. He has always seen his service to science as a basic duty for the benefit of society.

Robert Gerwin

(Stuttgerter Zeltung, 4 December 1971)

Hospital situation has improved

The results of a recent survey of the medical professions conducted by the Federal Statistics Bureau reveal that Lower Saxony, with a doctor for every 743 inhabitants, has the lowest proportion of doctors next to the Rhineland

West Berlin, with a doctor for every 363 Inhabitants in 1970, had the greatest proportion. The doctor position h Ham. burg was equally as good. Reseland Palatinate was in last place with one doctor for every 756 inhabitants.

The 1970 figure for the Federal Repub. lic as a whole was one doctor to 621 inhabitants. The comparative figure to 1960 shows that there was one doctor to every seven hundred or so inhabitants.

At the end of 1970 there were 99,654 doctors in the Federal Republic, a rise of six per cent over 1969. But house-tohouse medical care has not improved. While the number of doctors employed in hospitals increased by seventy per cent in the last ten years and by fourteen per cent in 1970 alone, the 50,731 general practitioners registered in 1970 are not many more than the number ten years

The Federal Statistics Bureau has calculated that a general practitioner had an average of 2,332 potential patients in 1970. This figure is 474 more than the

The proportion of self-employed specialists on the other hand has improved. There was one specialist for every 2,519 inhabitants in 1970 compared with one for every 2,905 in 1960.

The medical service offered by hospitals has also improved. In 1960 there was one full-time hospital doctor for every 2,480 inhabitants. In 1970 there

was one for every 1,600.

The Federal Statistics Bureau also registers a general trend for medical care to be transferred from general practitioners to hospitals. Within the last ten years the proportion of people admitted to hospital for treatment has risen by fifteen per

The number of dentists in the Federal Republic may not have dropped in 1970 but as the figure of 31,175 dentists remained practically constant while the population figures rose, dental services

deteriorated. While a practising dentists had to take care of an average of 1,963 inhabitants in 1969, this figure had risen to 1,984 by

The proportion of dentists in the Federal Republic may still lie above the World Health Organisation's specification of one dentist per two thousand in-habitants but there are grounds for concern over future developments, the Statistics Bureau claims, Since 1965 the proportion of dentists has sunk by six par cent. Compared with the 1960 figure there has been a decrease of sixteen per

Leg operation

ew surgical techniques to make short legs longer have been developed by Heinz Wagner, the head physician at the Wichernhaus Orthopaedic Clinic in Altdorf near Nuremberg.

This method, now revealed to the public at large in the latest issue of the medical journal Der Chirurg, can correct leg damage that has resulted in a shortening of between two and eight inches.

Without an operation of this kind people handicapped in this way would have to wear the costly and conspicuous orthopaedic aids that also cause them serious mental strain.

The Mary Ale St.

INDUSTRIAL RELATIONS

Chancellor Brandt intervenes in metalworkers' dispute

THE GERMAN TRIBUNE

This year is coming to a turbulent end as far as economic policymaking is concerned. The strike in the metalworking industry has reached it critical climax. The result of the meeting of the Group of Ten is Rome, far from clearing up the confused international currency situation only brought further complications to light, and a massive flood of hot dollars followed in its wake,

France and Italy had to seek refuge in distic measures in order to protect themselves against the latest flood tide of bilars, which has been encouraged in the federal Republic by the floating of the Mark. This floating, of course, continues to put an extra burden on our exporters, making their products much more expensive in foreign currencies.

Bonn Economic Affairs and Finance Minister Professor Karl Schiller in a recent speech to the Federal Association of Employers tried to spread a few comforting thoughts; he spoke of further lowering of Bank Rate and a further relaxation of the level of minimum required bank reserves.

He stressed that he was announcing this relaxation of the credit squeeze with the full blessing of the Bundesbank President Karl Klasen. But at a high level in the Bundesbank it is obvious that not everyone is agreed that it is reliable to influence the further development of the international parity of the Mark by means of adjusting the credit policy screws. This method is by no means guaranteed success in their opinion.

In the end the Bundesbank is powerless to do anything against the flood of hot dollars which came with the expectation that the Rome currency conference would lead to the devaluation of the American currency.

Defending the present exchange rate by buying up dollars is something that cannot be pursued ad infinitum. It is not

wise to spend thousands and millions of Marks to take care of vagrant dollars. This only leads to a further drop in the parity of the dollar and makes the Mark even more expensive.

The present rate of revaluation of the Mark since it was floated on 9 May this year is 12.6 per cent and it seems a foregone conclusion that if floating continues this will rise to thirteen per cent.

But how much longer can the West German economy stand the strain of this? With the purchase of incoming dollars and their exchange for German Marks the circulation of money in our economy is inflated.

If curreny policies are to be relaxed, some members of the Central Bank Committee say, why not by this method of supporting the dollar? It is necessary to await the findings of the recent Central Bank Committee meeting to find the answer to this.

In Bonn it is thought likely that they will go along with the Schillerian idea of relaxing the credit squeeze. The Economic Affairs and Finance Minister said recently that between now and the next meeting of the Group of Ten (17 December) "we will be going through a difficult phase of economic development".

But at the meeting of the Group of Ten in Washington It is virtually impossible for the great decision to bring about the end of the currency crisis to be taken. This has in the meantime become a decidedly political matter affecting not only rates of exchange but also the formulation of "comparative quotas" fol-lowing the desperate plight into which

the American currency has plunged.

This amounts to a division of the burden of United States deficits among the Western allies. This is the complex problem which will prove extremely difficult to clear up in the foreseeable

The basic uncertainty of the relationship between currencies has now been joined by the added disruptive factor of the wages dispute in the metalworking industries, which, together with car production which is also hit, forms one of the key industries in the Federal Republic. Both have been crippled by the

dispute. The special mediation procedure has not brought any success because of the firm stand taken by both sides. The last suggestion made by the President of the Mediation Commission was as follows:

An increase in pay scales of 7.5 per cent to be reviewed after one year and a thirteenth monthly payment of forty per cent of normal pay, to be brought within the scope of collective bargaining pro-

The employers have not so far agreed to such a compromise. According to their calculations if they accept this suggestion it will mean a 12.8 per cent increase in their wages bill.

They say that apart from the basic 7.5 per cent increase and the collectively bargained forty-per-cent thirteenth month's salary, which itself would also be outstanding payments to be made from the previous round of wage-scale negotiations. These would put yet another two

per cent on their production costs. The sum total of this, a 12.8 per cent increase in expenditure on wages, is obviously something they feel they can-

not approve. It must be added that this business of the thirteenth month's pay of forty per cent would not in all cases amount to an actual pay rise, since at least a quarter of employers in North Baden and North Württemberg already give their workers payments of this kind.

Therefore this part of the agreement would not have any effect on production Continued on page 11

Foreign workers are now

more integrated into society Josef Stingi, President of the Federal Labour Institute in Nuremberg, is not prepared to listen to stories of an employment crisis in the Federal Republic at present. He is expecting that this winter there will "certainly be 200,000 out of work", but this figure includes those

workers who have just given up their job anyway.
Whether the 2,200,000 foreign workers will prove to be a buffer against high unemployment of West Germans as was the case during the last recession in 1966/67 remains to be seen. But this is less likely. According to the Erlangen institute for research into the labour market and jobs: "Today foreign workers are more integrated into our society then they were then."

Has this integration into society siready taken place? The sociel position of the Gasterhalter in the Federal Republic is protected by law of course, but they have not yet been given complete equality in our society and remain second-class citizens. (Suddeutsche Zeitung, & December 1971)

Demographic investigations have shown that the number of West Germans available for filling vacancies in their own country is likely to decline in future. As a result of plans at present under way to improve education it is foreseen that there will be 1,800,000 fewer people ready to go out to work in 1985 than

In addition to this the likelihood of flexible retiring ages being introduced by 1973 means that there will be another 200,000 workmen fewer, assuming that about two-thirds of the 63 and 64 year-olds take advantage of going into retirement early.

there would otherwise have been.

This adds up to the fact that if the Federal Republic wants to continue to expand its economy into the distant future it will have to rely more and more heavily on foreign workers. It may even be necessary to think in terms of two to three million.

Thus, the employment of foreign workers can no longer be regarded as a temporary expediency to help West Germany get through an extraordinary boom period. Gastarbeiter are likely to become permanent fixtures.

The employment of people from abroad in the Federal Republic is today largely controlled by legal and social welfare provisions. There are bilateral governmental contracts, anti-discrimination measures, strictly controlled working contracts and organised aid or encouragements towards self-help, so that the material risks for these more than two million foreign workers are largely taken out of the hands of the individuel.

On the basis of bilateral agreements the Federal Republic sets up offices in the countries from which these workers come, to encourage recruiting. Experts from West German labour exchanges make prospective émigrés familiar with the demands they will meet if they accept the jobs on offer in the Federal Republic.

The first process of selection of suitable recruits is carried out by the home country. Then they are further vetted by he West German missions.

For instance they have to undergo a medical examination by German doctors, Then their trip to this country to join forces with their new employer is all

As a general rule their initial contract is for a period of one year only. This guarantees them a job and therefore full for this length of time. At the same time the proposed accommodation for the Gastarbeiter during his stay is checked out and the question of expenses if the worker decides to return home after one year is settled.

In the Federal Republic there is no far-reaching law about the status of a foreigner and his position in law. The matter of whether a foreigner may stay in the Federal Republic is determined by the Aliens Act of 28 April 1969.

And the provisions whereby a foreigner may work in this country are contained in "work promotion legislation" and a special set of regulations.

been taken care of, the residence permit and work permit in other words, the alien is fully integrated according to labour laws. There is no purely legal difference between a foreign worker and a West German worker in this country.

That is to say the foreign worker is subject to collective bargaining agreements, rules for dismissal, protection measures at work, factory floor regulations, legislation to prevent exploitation of young people and mothers and the

According to Company Law only citizens of the Federal Republic are entitled to sit on a Works Council, the only exception being for people from another EEC country.

But it is possible for employers and a majority of the workers in a firm to waive this rule and this is a right of which more and more companies are taking advant-

The Confederation of Federal Republic Trades Unions reports that about 400 foreign workers have so far been elected on to works councils. In companies with a large contingent of foreign workers there have even been foreign liaison workers appointed, who have voiced the interests of their fellow countrymen via the works councils, IG Metall alone counts 2,500 foreign liaison workers in its

Like their West German colleagues all foreign workers are from the first day insured against sickness - as are their relatives back home as long as these relatives are dependent on their earnings.

The Greek health insurance scheme

IKA in Athens for instance receives an all-in sum for the welfare of relatives of Greeks working in the Federal Republic. This is to cover all doctors fees and the cost of treatment.

Like West German citizens too these foreign workers have the right to claim unemployment benefit if they lose their job. Thus no foreigner needs to quit this country if he is thrown out of work and receives the full benefit of the work promotional legislations, for instance to find him a job and to give him professional and careers advice, to offer him further vocational training and re-training for new work.

Every foreign worker in the Federal Republic is entitled to a disability pension if he is invalided out of his job. Last year the contributions of foreign workers to the Federal Republic social security funds amounted to about 3,700 million

Their contributions have greatly helped to keep the pensions organisations affoat. These groups were struggling under an antiquated structure that was first created according to war needs. Of course the majority of these workers are in the younger age brackets and therefore their ensions will be paid out at a time when the average age of the German people is no longer affected by war casualties and the whole system has recovered its equili-

There is another reason why the contributions of foreign workers constitute a gain for those who have to support old-age pension schemes: a large number of foreign workers return home after a period of less than five years' work in this country and therefore has a claim to the contributions paid. But the sum paid by

The payment of child allowances is also governed by the principle of equal rights for all, and not just those children of Gastarbeiter who are living in the Federal

Special agreements concluded with the Italien. Greek and Turkish governments allow for children remaining behind in the homeland to qualify for child allowances.

But despite all the legal protection that has been devised for foreign workers a numbers of problems remains for them. They require accommodation that can put themselves and their families up As soon as both requirements have comfortably, their children require pro-

Foreign worken in West Germe

A the end of this summer there were shown 2,200,000 Gesterbeiter (foreign werkerd in the Federal Republis, of which 614,000 were women. The lengest group came from Yugoslevia (21.4 per cent), followed by Italy with nineteen per cent, Turks 18.9 per cent and Greeks 12.5 per cent.

On a national average one worker in eleven is a foreigner. These are the cities with the largest group Munich
Stuttgart
Frankfurt
Berlin
Cologne
Düsseldorf

About forty per cent of all foreign (800,000) are in fron and metal product and processing. 24 per cent (490,000) in other processing plants. Seventee, by cent (340,000) are in the service industrial and sixteen per cent (320,000) are in a building trade.

per schooling and vocational training they do not always have equal career opportunities and they need to be given a far greater say in the running of the country.

The North Rhine-Westphalia Ministry of Labour, Health and Social Welfare questioned approximately 2,700 families from abroad living in the Federal Republic about conditions in which they

The disturbing result of this survey was that forty per cent of their accommodation was without a kitchen, 64 per cent was without an indoor lavatory, thirteen per cent had no bath, WC and running water indoors. Nevertheless many of them are paying the same rent as they would for a flat of the same size.

The worse the accommodation, the

more the rent in 54 per cent of cases.

Of the 500,000 children under sixteen

belonging to Gastarbeiter most have been between four and ten years in this country, 120,000 of them are in the age group - where -education is compulsory, but about 30,000 do not go to school. Only in two states, North Rhine-Westphalia and Baden-Württemberg are foreign children also obliged to go to school.

Of the 90,000 who do go to school the education they receive is in many cases only scratching the surface. Only one third of them gets past elementary education, whereas the figure for German children is eighty per cent.

The main reason for this is that there are insufficient foreign and German teachers to help the children make the transition between their own language and instruction in German, Many of the countries who send workers to this country are not doing enough to recruit the teachers required.

Only one in five of foreign workers who come to West Germany have a skill or other professional qualification and the value of their qualifications tends to be well below that of comparable work men in this country.

About thirty per cent of the workes who have come to this country according to a survey conducted by the Federal Labour Office - have had to be given special training to make them-into skilled workers.

This education has come generally not from sitting at a school desk, but on the to giving Gastarbeiter adequate vocational training is the language barrier. Another is their lack of general schooling,

It is not easy to see how such a heterogeneous group can be given further assistance to fit into life in the Federal Republic. Local authorities and other organisations are studying this problem at the moment, and more and more attention is being given to it.

At the initiative of the Labour Minister

of North Rhine-Westphalia a state advisory council for Gastarbetter has been set up in Düsseldorf. This is designed to help "guest workers" fit in.

(Die Zeit, 10 December 1971)

March St.

Hopes and expectations that some-body in the Federal Chancellery will be able to slice through the Gordian Knot of wage conflicts in the metal industry have not yet been fulfilled. The forest fire is still spreading out from North Baden and North Württemberg and gathering

About 200,000 workers in the motor industry are affected by production itoppages with nearly all production lines it a standstill or shortly to be stopped. The spare parts are not there.

Meantime a number of spare part suppliers outside the areas directly affected by the strikes have come out in sympathy with their colleagues. These include the largest manufacturer of carburettors with factories in Neuss and

If the troubles in Baden-Württemberg are not cleared up with a satisfactory settlement soon, which would provide a basis for similar settlement in other areas there will be speedy process of escalation until the steel industry is dragged in, and that is an industry with enough worries of

its own already. One in seven workers in the Federal Republic is directly or indirectly attached to the motor industry. Vehicle building is the key industry in the Pederal Republic

Architects demonstrate the folly of letting cities go wild

Handelsblatt Industriekurier

miecis Josef Lehmbrock and And Fischer recently opened an ention in Munich's Neue Sammling whilecline of our cities.

He man who pays no regard to the this of his city is not a peaceable of his but a bad one," Pericles prodimed in Ancient Greece two and a half

sousand years ago.
The general public can see for itself that the cities are in a bad way today, and it is not just a matter of empty municipal coffers, the increasing number of road deaths and levels of pollution that are fast assuming health hazard propor-

Urban areas are also going to pieces as living communities, as environments in which it is possible to think in terms of one's home town.

The critics of this state of affairs include US economist John Kenneth Galbraith, who maintains that maximum profit has become the measure of all

They also include Munich's Social Democratic Chief Burgomaster Hans Jochen Vogel and Pope Paul VI, who can hardly be suspected of socialist leanings.

"The city allows new forms of exploitation and domination to evolve in which a number of people misuse the require-ments of others for purposes of speculation and utilise them as a source of illicit

This state of affairs prompted architects Josef Lehmbrock and Wend Fischer to design an exhibition in Munich's Neue Sammlung that documents both the causes and possible solutions to the

The city's loss of function is due to three factors, it is claimed, the first being the sterile, repetitive conformity of postwar so-called social housing, the result of which has all too frequently been a contact-killing desert of indestructible concrete along the lines of the Neue Vahr estate in Bremen or the Märkisches Viertel in West Berlin.

The second factor is the gradual demise of the city centre, a development for which not only free enterprise but also the local authorities themselves deserve the blame.

Whatever justification is there for locatng local authority facilities that are not Onsulted by the general public (the city aiditor's office, for instance) in residenthi areas on the outskirts of the city

Why, for that matter, should housing be demolished for the sake of bank and insurance head offices and the prestige of being able to build in a part of town in which the price of building land is

In areas of this kind, such as Lehel, Munich, the advantages of a central location are more than offset by the financial benefit to be derived from a suburban location that is reached without

much difficulty by public transport.

The third factor evinced by the organisers of the Munich exhibition is that town planners evidently still think in terms of a town geared to the requirements of motor vehicles rather than to those of the people who live in it.

One of the most impressive photos on exhibit is an serial view of Disseldorf showing the surrounds of the stock exchange, the Martin-Luther-Kirche, the Schauspielhaus and Jan-Wellem-Platz, The

surface area of road by far exceeds that of such buildings as there are in the

Such destruction of the city and the communications it is intended to provide cannot be offset by the creation of a few pedestrian precincts surrounded by a road network so impassable from the point of view of the ordinary pedestrian that they become aching voids without a soul in sight almost as soon as the shops shut.

People do not meet people when for purposes of enlivening the precinct during the evening a theatre is built, either.

A city is a conglomerate of residential, commercial and public facilities and must remain so even at its vortex. The various age groups and social strata must come

This admixture goes by the board when whole areas are cleared of housing to make way for administrative buildings that are used for forty hours a week at most and could equally well be located almost anywhere.

In its place social ghettoes are built, the inhabitants of which are virtually predetermined by the size of flats and the rent per square metre.

In a city that fulfils its natural functions all major facilities, shops and pubs must be within easy reach on foot, say within a quarter of an hour's walk.

On the basis of this concept the two architects responsible for the Munich exhibition have designed a new model

A model of a city-centre housing complex

city combining residential areas with what they consider to be an uo-to-date urbane atmosphere. The idea is to encourage debate and it is hoped that the general public will respond by voicing an

"In my view discussion of how we are to live in future is necessary but I do feel it to be even more necessary that wo realise that our cities ought not to be subjected to an even greater degree of destruction here and now. There must be no more clearance of residential areas to make way for administrative palaces that gobble up entire districts and there must be no more autobahns slicing fullyfledged districts in two."

(Photo: Kaulog) at in action in this country alone and

COMPUTERS

mputers is too expensive but this is less

At long last clients are beginning to realise that sideliners, data input and output equipment, for instance, are in the final analysis a more reliable criterion of

ment available.

omputers began to make headway in economics and research, trade and the efficacy of a computer, ministration, industry and politics a file over twenty years ago.
Currently more than 9,000 computers

Data processing congress

in Munich

More particularly, smaller computers performing independent functions are now being put to use on the periphery of the mainstream of production or whatever, relieving the central computer of timewasting minor calculations and making the more powerful device available for other tasks.

Slowly but surely computer users are

beginning to take a more critical view of

the range, size, scope and other character-

istics of electronic data processing equip-

Increasing attempts are also being made to put data processing to optimum use. In

mean that the size of the central device is

no longer felt to be the prime considera-

With the aid of a computer family of this kind, Professor Peter Lindemann of Sindelfingen commented, data processing systems of virtually any size and complexity, solve information problems in all sectors of life.

Technically, then, it can be done but at present the organisational prerequisites are so unsatisfactory that for the time being at least visions of what might be termed the monstrous regiment of computers are nightmares and nothing more.
Many people derive considerable bene-

fit from automated electronic data processing even though they may not at first glance realise the fact,

In industry manpower can be replaced by self-regulating and self-controlled systems. Administration can to a large degree be simplified and automated. Computers lend medical men valuable assistance in diagnosis.

In education they can help to improve teaching and learning facilities and in politics provide the powers that be with improved data for planning purposes and decision-making. Graduated old-age pensions can be calculated more quickly.

In computer practice tasks that lend themselves to data processing are terms of equipment this can be taken to catalogued in functional groups such as personnel, finances and population. To a large extent integration of these various functions is what is needed to ensure that computer systems are in a position to supply meaningful aids to decision-mak-

> In Munich Dr Werner Jähnig of Cologne dealt with the consequences of this integration. There could, he said, be no telling at present whether or not integration might necessarily lead to changes in the traditional divisions of responsibil-

> At all events, Dr Jähnig conluded, the integration of functional groups and ployment of computer systems cannot fail to lead to a greater degree of cooperation between the Federal government, states and local authorities.

> Increasing amounts of personal data are being put into computer storage. The resulting possibility of linking data on one individual stored in different places and summarising the whole gamut at will has given rise to a good deal of anxiety lest there be inroads made on the privacy of the individual.

> There are, however, according to Dr Herbert Auenhammer, a Bonn Ministry

Computers in the Federal Republic - number as of mid-year -

1970 3.895 1,030 650 1,068 232 1,004 7,269

official, quite a number of staff, organisational, technical and legal measures that can be undertaken to ensure that data is not made available to unauthorised ner-

Hesse passed legislation on the subject about a year ago and other states plan to follow suit. In order to forestall legal fragmentation a Federal data protection Bill is being drawn up in Bonn too.

This, however, as Dr Auernhammer pointed out, involves setting foot on ringin territory since there is next to no comparable legislation on the statute book by which to go.

And as only the beginnings of inte-grated interlinked computer systems as yet exist the detailed requirements are not indelibly clear. First and foremost, however, legislation must prevent abuse In the administrative sector.

On the other hand Federal legislation that is to be at all effective must also cover data protection in the private sector, particularly in industry.

Comparable protection of the individual must be ensured in both the public and private sectors, the special features of each having been taken into account.

New techniques not only create a danger; they also open up technical possibilities of countering these dangers.

> Konrad Müller (Stuttgarter Zeitung, 6 December 1971)

Work on Elbe autobahn tunnel goes ahead on schedule

On the south bank of the Elbe on the western outskirts of Hamburg the final preparations are being made for what promises to be an exciting technological western the submarates of the second-longest road tunnel in the world. venture, the submersion of the first of eight sections of the Elbe autobahn tunnel

Once the tunnel is complete it will be a major link in the E4, a European highway linking Stockholm in the north and Lisbon in the south. At the end of 1974 up to 65,000 vehicles a day will cross under the Elbe at a depth of eighteen metres (59 feet) and a speed of eighty kilometres an hour (fifty mph).

A nautical control panel, several command centres, harbour pilots, a signal ship, flares, radar and navigational radio, not to mention enormous miscellaneous technological expenditure, are needed to ensure that the gigantic tunnel section is firmly secured in its exact position on the

The first section is 132 metres (433 ft)

Its water displacement is equivalent to that of a fully-laden 17,000-ton freighter and for three or four of the hours it will take to lower it to the riverbed all shipping on the Elbe will be brought to a standstill.

This is the time it will take to tow the section into position with the aid of seven tugs. Submersion will take at least a further ten hours.

The project engineers reckon they will need more than a year to lower the other seven sections into position in the riverbed channel that has been specially dredged to hold them.

Once they are all in position interior work can get started down below. Traffic in the tunnel and its approaches is to be upervised with the aid of TV cameras. lights, interchangeable signs, mechanical

barriers and loudspeakers and the whole operation is to be masterminded by

But deadlines may well be thrown into

disarray by storms or fog.

The first delay occurred a few week ago on the northern bank of the me where 1,100 metres of approach tunne are being bored. Three enormous devices are ploughing their way underneath the steep banks of the river with a denselypopulated residential area overhead.

Because of unexpected structural damage evidently due to tremors cause by the bore work cartimoving had prematurely to be reduced in tempo to hibernation tempo in order to allow residents to be evacuated from the house that threatened to collapse under the strait

Preparations for work on the tunnel proper have also been unusual. The eight sections were prefabricated in a gigantic dry dock over a period of three and a hald years. The dock was then flooded. The sections on the bed of the dock

were then pumped empty, tugged out, prepared for submersion and then despatched to their final resting-place.
Dredging work on the riverbed change displaced some two and a half million cubic metres (3.25 million cubic yardi) of

lake that forms the centre of the city Hamburg. The construction of the first libe tunnel in 1911, admired all over the world as a technological masterpiece, was also an underwater adventure. Over the latest aircumpage of million of the first libe. past sixty years more than 500 million pedestrians and fifteen million moin

sand, enough to fill the entire Alster, il

vehicles have used the original tunnel.

The new tunnel, the eight sections of which boast a total length of 1,056 metres (more than five furlongs), is metres (more than five furlongs). destined to make these figures appeal diminutive. Hamburg is already taking of the construction work of the century. Gert Kistenmaci

Plans, plans and more plans for a more attractive Bonn

an Bonn learn anything from Brasilia? Hermann Schmitt-Vockenhausen. Vice-President of the Bundestag. headed a delegation which went to inspect the architecture and utility of the Brazilian capital. The delegation has now

Bonn is full of plans for building. While Herr Schmitt-Vockenhausen's delegation was in Brasil Interior Minister Hans-Dietrich Genscher revealed to the Bundestag the latest building plans that have been drawn up.

Herr Genscher, whose Ministry has responsibility for drawing up and organising ideas of Federal building, demands a lot. The new government sector of Bonn should be neither an "empty monument" nor a "forbidden city". The preliminary aim of plans for new building in Bonn should be the concepts of a modern city with environmental protec-

Hundreds of architects, planners and traffic experts have replied to appeals asking for ideas on how to create a government quarter in the municipal area between Siebengebirge and Venusberg.

In plans for building in Bonn buildings of political significance are not to be disregarded, buildings such as the Villa Hammerschmidt, Pulais Schaumburg, the old buildings and the main hall of the

The first phases of planning up to 1978 include the building of a new Bundestag, a new Bundesrat, a new Chancellery and Press and Information Office, one major and two minor ministries.

The medium and long-term plans up to 1985 include rebuilding between 10 und 12 ministries. These plans include the absorption of Beuel on the right bank of the Rhine into the Bonn municipal area.

New ministerial combinations are being considered in the planning. For instance the planners talk of ministerial groups such as Interior Ministry/Building Ministry/Family Affairs Ministry, or Transport Ministry/Ministry of Posts.

There are at present something like 16,000 people working in the Bundestag, Chancellery and the President's office.

Germany is popular with holidaymakers

ore than 194 million bednights holy accommodation during 1971, according to statistics released by the West German to the central tourist office, Frankfurt.

In the year before there were "only"

A spokemen for the central tourist office said that of all Danes who went abroad for holidays 29 per cent chose to

come to West Gernany.

Every fifth Dutciman who took a holiday abroad elected to visit West Germany, he added.

Americans and Austrians elected to go to Italy as first choice and then Cermany.
But Japanese put Germany in third place
after Belgium and Sweden.

The French, Swiss and Italians put West Germany fourth on their list of countries most layoured for a holiday. According to Interior Ministry investiga-tions this figure will be more like 22,600 by 1985.

THE GERMAN TRIBUNE

This example of Parkinson's Law will operate in government, according to the planners, despite the introduction of computer programming into the governmental system.

But it is not just increased personnel with demands for more office accommodation that has to be taken into account by Bonn's planners. People who worked in executive positions in government intend retiring and spending their retirement in Bonn. According to a survey 43.4 per cent of government workers would like to remain in the Bonn area after their retirement, 24 per cent intend leaving the Bonn area and 38 per cent have not yet made up their minds what to do.

The new plans do not intend creating a Bonnhatten' on the Rhine, smothering with urban development the old centre of Bonn, Bad Godesberg or Beuel. A green zone to stretch right through the Rhine, a place for the 1979 West German Horticultural Show and a place where citizens and politicians can meet is

The city planners and architects who have been entrusted to give the political centre of this country a new face in concrete, glass and green spaces and to do so without forgetting to give to their plans dignity must also keep in mind the hot-house climate that bedevils Bonn.

Walter Mössinger in action

The remainder of the youngsters have remained at club and association level. There has just been no supply of promising up and coming youngsters to put up a good show at the Munich Olympics,

"The organisation," 33-year-old Vaclav Kubicka from Prague, a former worldranking gymnast and national coach since coming to this country from Czechoslovakia in 1968, "is too vertically-oriented."

Youth champions who were once praised sky-high, for instance a young man by the name of Breitengraser from Neuss on the Rhine, who-in-1967 was this-country's best under-eighteen, abandon competitive sport and keep up gymnastics nerely as a hobby.

As a result they are lost as prospective international championship-winners for this country. In other countries and disciplines promising youngsters of their calibre would be paid special attention.

At Saarbrücken, the last competition of the season, the Rumanians fielded a seventeen-year-old and the Swiss an eighteen-year-old and both of them outplaced in them by lekens by winning a

classed this country's team, The layman can but shake his head in incomprehension and even the pundits are put out. Says 31-year-old Willi Jaschek, who retired a year ago, "When I see what our successors are like I feel like putting in a bit of training for Munich

For long years veteran champion Jaschek had a reputation for being a paragon of hard work and consistency.
The six hours a day training that are a
regular feature of life at the Frankfurt gymnastics training centre were part and parcel of Jaschek's day as long ago as It seems far from out of the question

now that Jaschek may yet make a comeback in time for Munich. If he does Mössinger, Spies, Gieger and physical now that Jaschek may yet make a education students Band Effing, 20, comeback in time for Munich. If he does from Mainz and Toni lades, 20, from it will be a clear indication of the bad sters is in. Wolfgang Uhring

1,010 women's soccer teams

Whatever opinion you hold of wo-men's football there can be no denying that it is a fact and its existence emphasises the interest women are showing in team sports," says Annemarie Griesinger of Markgröningen, deputy chalman of the Federal committee on sport for women.

This commentary was prompted by the news that only a year after the FA agreed to the formation of women's football teams 1,010 teams have already been established and total membership has reached the figure of 73,338.

These figures do not even include Hesse and Schleswig-Holstein, two of the eleven constituent regions of the DFB, as the football association is known in Germany. Already, then, 2.5 per cent of the membership of the largest sporting or-ganisation in the country are women.

Frau Griesinger, who is also a member of the Bundestag, went on to point out that increasing numbers of women are joining sports clubs. This year alone the number of women members of clubs and associations affiliated to the Sports League has increased by roughly 220,000 or some ten per cent to 2,441,000.

"The most gratifying aspect," she said. "is the increase in the number of younger women between the ages of 21 and 25, a percentage increase of 42.1."

Growing interest, Frau Griesinger feels. is due to keep fit campaigns and the splendid performances of top-flight women athletes in field and track athletics,

gymnastics, hockey and rowing.
"These impressive figures," she went
on, "ought not to blind us to the fact that many clubs still have very little to offer to women members. An example of first-rate facilities for women members is provided by the Disabled Sports Association, the women membership of which increased by 489.7 per cent between 1957 and 1971."

In two sports associations women are in the majority. They account for 68.1 per cent of the membership of the Roller-Skating Association and 55.7 per cent of the membership of the Gymnastics Asso-

Membership of the Ballroom Dancing Association is, by a fortunate coincidence, roughly 50:50 and more than two fifths of the swimmers, water-skiers and tennis and golf-players are also women. (Frankfurter Aligemeine Zeitung für Deutschiend, 11 December 1971)

No visas required for Olympics athletes

The Federal government is to abolish visa and passport restrictions on for eign participants in next year's Olympic Games in Munich and Kiel. According to the Ministry of the Interior a decree to this effect has been submitted by th Minister to the Bundesrat, the Feder Republic & Upper House, for approval.

Between 16 June and 15 October 192

all foreigners in possession of an ID card issued by the foreign in possession of an ID card issued by the Company of the Clympic Games will need righter passports to enter the country nor visas to stay here. This regulation will apply to their aides. (Frankfurter Alfomeine Zeitung für Deutschiand, December 1971)

Neustadt an der Weinstrasse – a go-ahead town

eustadt an der Weinstrasse, the town where the Weing that had the entire team board? German and Palatinate Wine Queen is crowned, is the fact remains that out of two centre of local government in Rhine-Hesse-Palatinate.

Noustadt, also called the "Pearl of the Palatinate" includiozen Hambach Castle, the cradle of German democracy. The art ading. includes the largest vine district in the Mittelhaardt.

Diedesfeld, Hambach, Haardt, Gimmeldingen and Königsber year-old chief coach Eduard Friedrich. are, since the administrative reforms in the town, names mastics clubs spend their time or-conjure with among wine experts. Mussbacher Eselshaut also be ising hikes or musical evenings but

Annually thousands of visitors come to the "lese" festival mastics. have a taste of the new wines.

Neustadt an der Weinstrasse, right in the middle of the Clubs as they mostly are at present vineyard tourist route, is an ideal place for congresses at the pedestrian officials that run them conferences. In the Saalbau, which in a few years time will the pedestrian officials that run them conferences. In the Saalbau, which in a few years time will the pedestrian of once celebrating 100 years of its existence, there is accommodate went though all that renains of once for hectic and light-hearted or earnest and formal meeting and traditions is the march from one where all kind of human problems can be discussed. where all kind of human problems can be discussed.

Nature has been generous to Neustadt giving the town skill worthy of attention. In March and April lanes of almond treat and attract visitors by the thousands. When Neustadt-Gommelding mastics remain sacrosant. The almond blossom festival and the almond blossom festival queen is chosen this is the beginning of merrymaking the rest of the year, and wine stands godfather to the festivities and a sweetches with a sign of the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the smallest run-of-the-mill the rest of the year, and wine stands godfather to the festivities are the small the rest of the year.

Figs, lemons and sweetchesnuts give the countryside in masticna produce delicious fruit.

The town and its officials keep up with developments, particularly the new economic developments that involve the town. Restoration work on the old parts of the town already begun. Pedestrian ways are being laid out and with it building of additional accommodation a basis is being provided for the expansion of trade and business.

The establishment of an industrial area will go a long wittowards providing the town with more income. Schools a being built and there is a general air of getting things done.

Neustadt, is an old town with a young heart, tackling purposefully present and future problems.

Between Munich and Kiel – explore 2000 miles of Germany

German cities present many faces to the visitors, full of tradition and yet modern. They are pulsating with life and are cosmo-politan meeting places, offering you the treasures of the past and the pleasures of the present.

Sparkling springs every-where, more than 200 spas. Springs for heart and kidney complaints, for every liver and stomach, for all types of treatment. And if nothing alls you, golf and fresh air will make you feel better still.

Here there's nothing virtu-ous instaying thirsty. Wine has been grown for nearly 2000 years. Every town has brewed its own beer since the Middle Ages whilst German sparkling wine camein about 1800. You'll neverbe dry irt Germany.

A shopping spree in tamous streets. Perhaps in elegant shops that sell fine jewellery, rare antiques and trendy fashions. Or in the little bakery. After all, there are more than 200 kinds of bread in Germany.

Albrecht Dürer was born 500 years ago. He painted in the ancient town of Nürnberg, where his house still stands. You will see many towns in Germany which still look as they did in Dürer's time. will discover in 1972-Germany, scene of the Olympic Games. Follow the whole, or part, of the 2000 mile "Olympic Tour" we have designed for you.
